The LCP Leadership Accelerator™

A Decision-Oriented Evaluation Approach to
Shaping Leadership Identity, Behavior and
Performance.

Dr. Glenn Williams
Version 5.5

Updated: 24 August 2020

Shaping identity and performance

Systems and organizations play a powerful role in shaping the identity and performance of those in leadership roles. As significant as this truth is, understanding the extent to which they influence the behavior of leaders, their life trajectory, philosophy or ideals to be pursued, was for many years considered to lack the rigor of science and relegated to the realm of mystery.

As science has sought to understand the impact of a person's identity and how that person's beliefs, assumptions, and behaviors are shaped and transmitted by different systems and institutions, organizational culture has emerged as a critical player.

It is critical, not so much because it is singularly dominant, but because our workplaces can become pervasive in contrasting ways. They can both enable and empower human development by helping us to achieve significant life goals or, from their demands and stresses create conflicts that prevent us from experiencing success in other important areas. What we are learning is that the goals of succeeding at work and outside of work should not be mutually exclusive. In fact, in a competitive market, there is a growing body of evidence that suggests organizations and leaders place themselves at great risk if these contrasting goals are not respected or ignored.

The importance of asking discerning questions

Validating the efficacy of the LCP Leadership Accelerator™ against its primary objective to increase and *transform leadership capacity*, has been a major goal from the beginning. From engagements with leaders and their teams in Australia, Europe, Middle East, South East Asia, and the U.S., LCP Global identified five anchor points that provide leaders with a foundation for their leadership identity and behavior, giving rise to questions such as:

- Where have I come from? What, and who, has influenced me the most?
- What motivates me? When am I fulfilled the most? What energizes me?
- What influences the way I make decisions? How do I manage risk?
- What hinders me or constrains me from achieving my goals?

- How can I perform better? In which areas do I need to develop?
- What relationships are most important to my wellbeing and performance?
- How well am I able to change direction or adapt my goals when it is necessary?

Reflecting on these questions provide leaders with a greater understanding of how they make key decisions, what resulting behaviors or actions are likely to occur, and how these factors continue to influence their role, relationships, goal-setting activities, and the outcomes they are responsible for. More specifically, they focus on a dynamic interaction that defines the importance of their identity, how it is shaped, and its impact on results.

While a leader's immediate context influences this interaction, the entirety or gestalt of that person's journey is equally important where the whole of his or her life is different from the sum of his or her parts. Understanding the uniqueness of this learning journey, business owners and leaders are better equipped to understand how their decision-making and behaviors affect their ability to achieve the results they want.

How leaders perceive themselves and define their roles

There are three key areas that influence how leaders perceive themselves and define their roles:

1. Their identity

This is what leaders believe about themselves, their role, their unique attributes and competencies, their definition of success, what motivates them, the level of self-awareness and confidence they possess, and the relationship between what they value the most and what they want to achieve.

2. How meaning is attached to what leaders learn, and how this influences their goals

Leadership is a lifelong learning journey, not defined by a single event or an assigned leadership role or promotion. It is defined through a person's ability to acquire and maintain meaningful perceptions of what leadership is by how it is modelled, portrayed by media, defined by thought leaders and authors, influenced by what is seen through different institutions, and absorbed from thousands of social interactions throughout childhood into adulthood.

3. The collective influence of others

Just as leadership is a lifelong learning journey, it is also the sum of many social interactions with key individuals and institutions leaders have been connected to such as family, kinship, teachers, mentors, coaches, and membership of a specific group, network or profession.

By understanding the interplay of these three components, leaders can create meaningful goals and find a way to resolve conflicts that frequently occur that demand a significant investment of time, energy and emotional resources to manage.

Primary anchor points that influence a leader's development and performance

Adapted from the work of Kellerhals, Ferreira and Perrenoud, and informed by the works of Edgar H. Schein in *Organizational Culture and Leadership* and Manfred Kets De Vries in *The Leadership Mystique: Leading Behavior in the Human Enterprise*, LCP® has identified five leadership anchors across three levels of leadership that are necessary to achieve sustainable success.¹ These are:

(1) A leader's external relationships – Leveraging Relational Currency

These represent the key relationships and stakeholders in a leader's world in which he or she interacts with, belongs to, identifies with, is influenced by, and gives context to his or her identity and experience. Of concern, is that for many leaders, there is a decline in the quality of their social connections as their responsibilities increase; and that the quality of their relationships outside of work have a direct bearing on the quality of their relationships at work. This has obvious implications.

(2) A leader's symbols of success – Understanding Motivational Drivers

How leaders define success for themselves influences how they see themselves in relation to those they lead, compare themselves to others; and how they want other leaders (and non-leaders) to view them. Symbols of success are often attached to certain relationships and which ones they consider to be more important than others. They take on many forms such as a university degree framed on an office wall, a title on a business card, a professional membership, the letters after/in front of a person's name, a waterfront property, a nice car, or remuneration package. It might be a picture of a family on their desk, or a collection of items or trophies revealing significant achievements and travels. To achieve their goals, leaders must understand what motivates them, while having an acute appreciation for the motivational drivers of those they lead. This has a bearing on *how* those goals are achieved.

(3) A leader's value code – Building Resilient Character

A leader's value code is a set of intrinsic values that influence a person's behavior and informs the decisions he or she makes. It represents how they want to be recognized and what they want to be known for. At a deeper level, there is a question about the resiliency of their intrinsic values, particularly how they apply across different contexts or when they are under pressure to take shortcuts to achieve results. Dr. Williams' doctoral work has explored more deeply the relationship between leadership character and performance at an individual level and more widely as an enterprise, leading to a greater understanding of how organizational culture, leadership identity, and wellbeing affect decision making and performance.

(4) A leader's personal script – Empowering Effective Decisions

Every person enters adulthood with thought processes and behaviors learned and adopted from childhood. Some of them stem from positive experiences, while others may have resulted from more painful encounters. What we do know is that they contribute significantly to the development of a person's 'script' or internal wiring that determines how a leader thinks, and ultimately behaves. This script becomes a mental model that provides a structure for a person's beliefs, assumptions, and behaviors. It is written from more than an accumulation of experiences; it is reinforced through family stories and narratives that have emerged from countless human interactions from diverse contexts. To help leaders develop new mental models the LCP methodology introduces the power of reflective thinking and the strategy of (re)framing to address dysfunctional leadership patterns and poor decision-making.

(5) A leader's trajectory – Transforming Goals and Outcomes

A leader's identity is indelibly linked to examples of leadership they have been exposed to and made an impression. Consequently, each leader presents a model of leadership that becomes an important reference point to those they lead and to those who watch from a distance - either positively or negatively.

Leaders, therefore, make impressions in the eyes of others, and in their respective contexts. These impressions are not the result of any one behavioral expression, but much more profound; a leader's life trajectory is a "way of being with others that embodies an ideal to be pursued" (Kellerhals et al, 215).

By aligning their efforts around the power of *the 5 Leadership Anchors™*, leaders have a clear framework for their learning journey that enables them to explore different ways to achieve goals that challenges more traditional methods of goal-setting practice. This framework introduces an architecture for the intangibles of a leader's DNA that becomes part of an important process for organizations who want to build internal capability that moves beyond results to creating a high-performing culture.ⁱⁱ

The LCP Leadership Accelerator™: A framework for measuring the relationship between active learning and results

Increasing the value of employee knowledge through connectivity

The LCP Learning Accelerator™ uses a strengths-based and decision-oriented evaluation approach that constructs a personalized leadership development framework for leaders that measures change and results in terms of intellectual capital and connectivity with a built-in feedback mechanism.

This approach monitors performance of outputs and evaluates outcomes that reflect change of trend or behavior (goals). The decision-oriented approach adopted by LCP® is in line with expert recommender systems used by organizations to manage and connect employees with the knowledge they needⁱⁱⁱ. The value of that knowledge increases as employees understand its connection to their goals and development. Locating and measuring expertise is the challenge, as expert recommender systems draw upon one's social network in a people-centric approach^{iv}.

Increasing performance by making better decisions

A key attribute of a decision-oriented evaluation approach is that its organizer is, decisions.

Its sole purpose is to provide a knowledge and value base for making and defending decisions. Its strength is that it encourages the use of reflection and evaluation to plan and implement strategies to achieve desired outcomes. It helps justify decisions and requires a necessary collaboration between an independent evaluator (coach) and decision-maker to avoid blind spots, bias, and influence of external pressures.

Therefore, the uniqueness of LCP's approach is that it measures the value and connection of a person's intellectual capital against their behavior and desired outcomes; and ultimately, their performance. Intellectual capital is comprised of four types of capital –

- **Human capital** represents one's expertise, competence and experience.

It comprises organizational memory (accumulated information from working with organizations), tacit structural capital (learning organizational contribution), tacit relational capital (knowledge tied to the individual rather than the position).

- **Structured capital** is codified knowledge (internal knowledge that is shared).
- **Relational capital** represents the nature and purpose of important relationships and the significance of how they interact.
- **Social capital** looks at one's social status and reputation, indicating that it's not just what you know but who you know.

The LCP Leadership Accelerator™

The LCP Leadership Accelerator™ captures and distils client responses into a series of personalized journals that are foundational to their 90-day goals.

Also unique to this approach is, users can identify and leverage relevant data from previously completed quantitative and qualitative assessments, and evaluate its usefulness against current challenges, goals, and desired outcomes.

To enhance the user-engagement process and reduce the possible 'drop-out' rate of time-poor, busy leaders (particularly those in senior roles), the reflective process is segmented into five online phases, with users receiving a tailored journal at the completion of each phase. These journals become the foundation of a leader's development journey over four quarters of a 12-month period as they reflect on what they have learned in the previous 90-day timeframe and apply those insights as they reset their goals for subsequent 90-day periods. Updated quarterly reports are also tailored to each person's unique context and leadership challenges.

While sustainable results over the long-term are the goal, the results-orientation of the LCP Leadership Accelerator gives individuals and organizations the ability to gain momentum and measure short-term success using 90-day engagement cycles.
